HIGHLIGHT OF QUALIFICATIONS

- Full Stack Engineer with over 4 years of experience developing scalable web applications. Expert in building robust full-stack solutions using **Python (Django, FastAPI)**, JavaScript (**React/Next.js**), and both SQL and NoSQL databases
- Experienced in both startups and consulting, bringing a growth mindset, strong ownership, and accountability to both new product development and legacy applications while keeping work organized and focused on user needs.
- Developed responsive, component-based user interfaces using **React**, Tailwind CSS and **TypeScript** to translate complex design requirements into functional features, significantly improving frontend type safety and reducing production UI bugs
- Applied strong problem solving skills through cross-functional collaboration with Product and Design teams to resolve a critical discrepancy between requirements and acceptance criteria, ensuring delivery of a user-centric solution
- Promoted a collaborative team culture by participating in agile ceremonies, mentoring new hires, and providing consistent operational support to coworkers, which accelerated knowledge transfer and improved overall team delivery efficiency

WORK EXPERIENCE

Full-Stack Developer

Jun 2024 - Sep 2025

Evenset, Toronto, ON

- Designed and developed scalable front-end features using **React**, Formik, JavaScript, and **TypeScript**, improving user experience and maintainability
- Implemented polymorphic models in **Django** on a **PostgreSQL** database to address the need for optimized database performance with multi inheritance data, which effectively reduced query time and increased overall application efficiency
- Improved engineering onboarding efficiency by documenting previously undocumented workflows and building a comprehensive runbook, cutting deployment and setup time by ~50% and reducing repeated peer-to-peer support requests
- Took ownership during a 2-month gap without a senior developer, quickly learning Next.js to maintain development continuity, demonstrating accountability and contributing to on-time delivery and client satisfaction
- **GitHub**-based code reviews and version control practices, improving feedback speed and project traceability
- Enhanced CI/CD pipeline by adding a linting stage to automated audit, test, and deployment processes, improving code quality checks and reducing integration errors.

Backend Developer / Machine Learning Engineer

Jan 2021 - Jun 2023

Sokhan AI

- Implemented a foundational full-stack web application to provide a core product and comprehensive Swagger documentation using FastAPI, **ReactJS**, and **Docker** which reduced the efficiency of future users from 8 hours to less than 30 minutes

- Developed five microservices for complex banking conversation domains by converting client requirements into **Python**-based solutions, ensuring improved system performance
- Managed Docker-based deployments on Linux servers, ensuring stable production releases and continuity of service during a DevOps engineer absence
- Improved conversation accuracy by 5% through refactoring code, debugging conversation flows, and enlarging NLP training data via augmentation and optimized generation tools
- Improved deployment efficiency and code quality through active participation in GitLab review processes and version control, resulting in faster feedback loops and enhanced project traceability
- Converted a slow system of non-uniform lookup files to a structured **MongoDB** schema, ultimately decreasing query response time for high-volume operations

PROJECTS

Around HR | Humber Polytechnic Capstone Project

May 2026 - present

- Led the modernization of a legacy front-end application by migrating to **React** Router v7, improving scalability, maintainability, and overall application performance
- Collaborated with developers and stakeholders through cross-functional collaboration to redesign the application architecture and build reusable **TypeScript** components
- Solved development environment inconsistencies by introducing **Dockerized** workflows and standardized tooling reducing deployment time by 40% and improving reliability
- Demonstrated leadership by coordinating development activities, conducting code reviews, and maintaining project documentation through **GitHub**
- Showed resilient problem solving while working with a legacy codebase, overcoming technical challenges and ensuring continuous project delivery
- Refactored core modules into structured, reusable components adhering to DRY principles, which reduced onboarding time by 50% and established a scalable foundation for future feature expansion

Daily Quran: AI-Powered Chrome Side Panel Extension [Link](#)

Nov 2025 - present

- Designed and developed a **React**, **TypeScript**, and Tailwind CSS Chrome Side Panel extension, allowing users to access AI-powered Quran content while maintaining their existing browsing workflow
- Leveraged emerging technologies including Google Gemini AI, OpenRouter, Chrome Extension APIs, and serverless computing through a NestJS backend to deliver scalable, user-focused functionality

EDUCATION AND CERTIFICATION

Software Development Bridging Program , Frontend Humber Polytechnic	Mar 2026 - Jul 2026
Javascript Algorithms and Data Structures freeCodeCamp	Nov 2021
Master of Science , Condensed Matter Physics Al-Zahra University	Aug 2015 - Feb 2018
Bachelor of Science , Physics Islamic Azad University, Science and Research Branch	Jul 2011 - Jul 2015
